

# Mipa P 19 E styrolfrei

**Mipa P 19 E styrolfrei** is a 2K polyester high build body filler based on renewable raw materials. The high-quality PE lightweight filler is ideal for levelling recesses and unevenness in car repairs and in vehicle and mechanical engineering. Thanks to its styrene-free formulation, Mipa P 19 E also enables particularly health-conscious working.

- Use of approx. 50% renewable or naturally occurring raw materials
- No differences in processing compared to conventional polyester putties
- Very good adhesion to iron, steel, aluminium, GRP, galvanised substrates and wood
